 Trait

 State

Neuropsychological Assessment

- Standardized tests used in a neuropsychological evaluation typically assess functioning in the following areas:
 - Attention
 - Learning and Memory
 - Executive functions
 - Visual-spatial functions
 - Language functions
 - Sensory-Perceptual functions
 - Processing Speed
 - Motor functions
- Academic skill development and emotional functioning are typically assessed as well.

Neuropsychological Assessment

- Advantages:
 - Cognitive functioning
 - Broad Spectrum of brain functioning
 - Standardized procedures
 - Psychometrically sound
 - Reliable scoring methods

11

Neuropsychological Assessment

- Disadvantages:
 - Outmoded Tests
 - using methods developed 60-100 years ago!
 - Ecological Validity
 - Relevance to real world functioning

Executive Functions

39

VRCPAT: HMD Scenario

Neurocognitive Domains

Currently assessed:

- Attention
- Learning and Retrieval (Memory)
- Information processing speed

To be developed:

- Language/Verbal Skills
- Executive Function
- Visuospatial perception

Virtual Reality Cognitive Performance Assessment Test (VRCPAT)

MEMORY MODULE

ENCODING

(getting the information in)

CONSOLIDATION

(transferring information into long-term store)

RETRIEVAL

(getting the information out)

Study 1: Memory Module

Parsons, T.D., and Rizzo, A.A. (2008). Initial Validation of a Virtual Environment for Assessment of Memory Functioning: Virtual Reality Cognitive Performance Assessment Test. *Cyberpsychology and Behavior*, 11, 17-25.

Study 1: Memory Module

- **Neuropsychological battery**
 - Pencil/paper tests: including Self-reports and Demographics
- **Virtual Reality (VRCPAT)**
 - Learning Phase: Trials 1-3 (Similar to HVLT & BVMT-R)
 - VR Acclimation Phase
 - VRCPAT Immersion Phase
 - Capture images of 10 items (from Acquisition Phase: Trials 1-3)
 - 2 images at each of the 5 Zones
 - Time limit = 1 min. for each Zone
 - Actual immersion is around 15 min.

Study 1: Memory Module

- **Sample:**
 - 70 healthy subjects (50% female)
 - Recruited from undergraduate and graduate schools.
- **Comparable in age, education, ethnicity, sex, self-reported symptoms of depression**
- **Age Range:**
 - 21 to 36 (mean = 24.97, SD = 3.78)
- **Education Range:**
 - 13 to 20 years (mean = 16.13, SD = 1.69)
- **Inclusion/Exclusion Criteria:**
 - Excluded persons with significant psychiatric history
 - Excluded persons with significant neurologic history
- **USC's Institutional Review Board**

45

Study 1: Memory Module

<i>Learning</i>	- HVLT Trials 1–3 - BVMT-R Trials 1–3
<i>Memory</i>	- HVLT Retention and Recognition - BVMT-R Retention and Recognition
<i>Executive Functions</i>	- TMT B - Stroop Interference
<i>Attentional Processing</i>	- WAIS-III Digit Span Forward - WAIS-III Digit Span Backward
<i>Processing Speed</i>	- TMT A - Digit Coding
<i>Verbal Fluency</i>	- Category Fluency - Letter Fluency

46

Study 1: Memory Module

- | | |
|--|---|
| 1. intact wooden barrel with US Army stencil | |
| 2. man with blue shirt (white stripes) | |
| 3. tanned Caucasian American soldier with moustache | |
| 4. camel with an M brand on rear left side | |
| 5. large red shipping container numbered 7668 | |
| 6. sealed wooden crate with Iraqi flag on side corner |  |
| 7. injured brown and white dog on its side | |
| 8. blue car with bullet holes in the windshield | |
| 9. sign above door with English words "Internet Homeland" | |
| 10. Robed man holding cell phone by graffiti image of Saddam on wall | |

ISC

Study 1: Memory Module

48

ISC

Study 1: Memory Module

- **Demonstrate:**
 - HMD, earphones, and controller
 - Adjust for proper fit
- **Acclimatation:**
 - Participant navigates the Virtual Environment

Once instructions are clear, participant begins scenario

49

TSC

Study 1: Memory Module

- **Capture images of 10 items**
 - from Acquisition Phase
 - Trials 1-3
- **2 targets at each of 5 Zones**

50

TSC

Study 1: Memory Module

51

ISC

Study 1: Memory Module

52

ISC

Zone Targets

Injured brown and white dog on its side

Sealed wooden crate w/ Iraqi flag on side corner

Zone Distractors

Blue car *WITHOUT* bullet holes in the windshield

Man with *RED* (instead of blue) shirt

53

TSC

Convergent Validity

Theory

Neuropsychological tests (HVLТ; BVMT) reflect a memory construct

Memory construct

Verbal Learning

Verbal Memory

Visual Learning

Visual Memory

Observation

VRCPAT & NP Test Correlations

Learning

HVLТ Trials 1-3	0.58
BVMT-R Trials 1-3	0.75

Memory

HVLТ Retention	0.50
BVMT-R Retention	0.40

the correlations provide evidence that the items all converge on the same construct

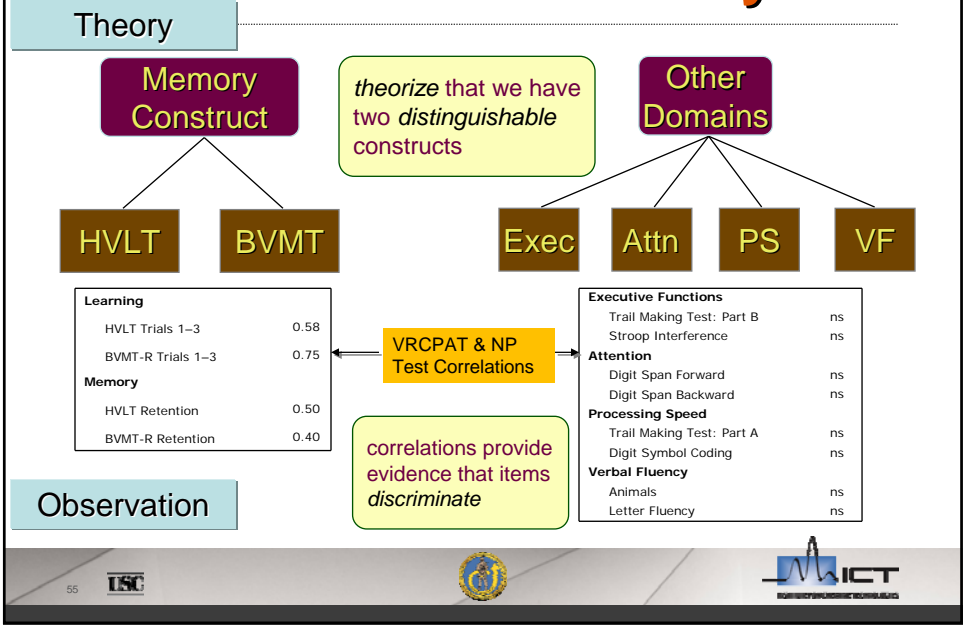

54

TSC

www.dod.mil

Discriminant Validity

Virtual Reality Cognitive Performance Assessment Test (VRCPAT)

ATTENTION MODULE

Focused attention

(respond discretely to specific stimuli)

Sustained attention

(maintain consistent behavioral response)

Selective attention

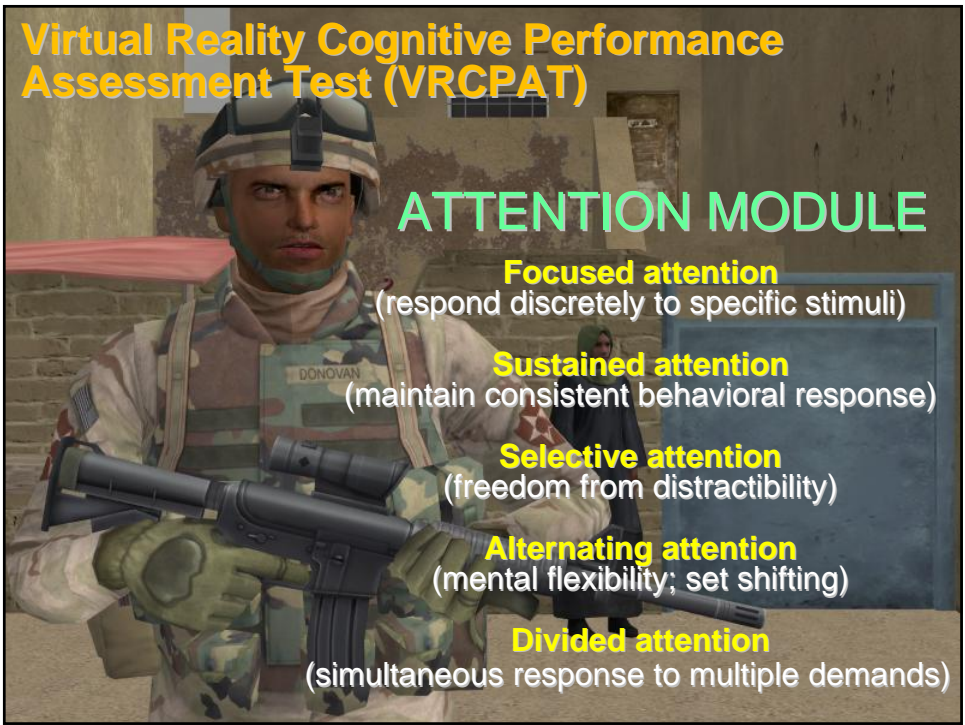

(freedom from distractibility)

Alternating attention

(mental flexibility; set shifting)

Divided attention

(simultaneous response to multiple demands)

Attention Module

- **Fixed position in the virtual city test**

- Requires user to man checkpoint

- **Exploratory Path**

- well marked to minimize navigational cognitive load

- **Humvee scenario**

- User will be either driving or riding as a passenger in a simulated Humvee
