

Healthy individuals are needed for a research study conducted by the Palo Alto VA Hospital and Stanford University. This study applies state-of-the-art Magnetic Resonance Imaging (MRI) techniques to measure the effect of traumatic brain injury on thinking and memory.

Eligible Participants:

- Healthy males and females between the ages of 25 and 50.
- No current or history of neurological, psychiatric disorders, or traumatic brain injury.

You will be compensated for your time.

Participation will last approximately 5 hours (one to two visits).
