Purpose Statement
Questions about brain health, mental health, and identity adjustment are common in post-deployment health care, yet medical training does not typically address how these complex factors impact Veterans’ functioning. The goals of this intermediate-level webinar are to provide an overview of deployment-related mental health and brain health concerns, discuss how to screen for symptoms, and offer information on where to refer for additional services. Level 2 and level 3 evaluations are provided. This live-virtual knowledge based program is appropriate for healthcare teams.

Target Audience
The target audience for this intermediate activity is comprised of Physicians, Nurses, Social Workers, and Psychologists.

Outcome/Objectives
At the conclusion of this educational program, learners will be able to:
1. identify three examples of deployment-related mental health considerations;
2. identify three examples of deployment-related neurocognitive issues;
3. apply clinical skills in screening for post-deployment mental health and neurocognitive concerns; and
4. describe where to refer Veterans for additional services for mental health and neurocognitive health.
