Volunteers Needed
for Research on Deployment Exposures and Lung Health

Eligibility:
Veterans who deployed to Afghanistan/Iraq (post-9/11) who may have been exposed to burn pits, dust/sand and air pollution during their deployment. The purpose of this study is to determine potential effects of deployment exposures on the lungs, heart and blood vessels.

Duration:
Your participation may involve 1–3 sessions lasting 2–3 hours each session. Sessions will include questionnaires, exercise and breathing assessments. Additional follow-up testing may occur in the future. In appreciation of your time you will receive compensation.

Location:
War Related Illness and Injury Study Center
VA New Jersey Health Care System
385 Tremont Avenue, 11th floor
East Orange, New Jersey 07018
Principal Investigator: Michael Falvo, PhD

Please call the War Related Illness & Injury Study Center and ask for the Pulmonary Vascular Study Research Assistant:
