ARE YOU A VETERAN WITH CHRONIC PAIN? DO YOU FEEL HOPELESS?

**Purpose**

Chronic pain is one of the most common healthcare issues that Veterans face. We are conducting a study where we hope to learn whether a remote-delivered problem-solving treatment will reduce disability and impairment caused by chronic pain and feelings of self-harm compared to receiving attentional control.

**Study Details**

Seeking Veterans who experience chronic pain such as muscle/joint pain or widespread pain and thoughts of self-harm. Veterans can participate in the study in-person or completely remotely. If you qualify and choose to take part, you will:
- Receive 12, ~1 hour remote-delivered sessions of either Problem-Solving Treatment or Attentional Control with a Study Provider.
- Complete 4 questionnaire packets over 6-month period
- Compensation is available.

**Location**

We are enrolling Veterans from anywhere in the U.S.
